

human input

AI input

database
for idea
+ tweet +
latex papers.

papers
stored as
latex projects
but should
like google doc
w/ cursor
diffs...

UI Pt. 1

* For now this is ONLY FOR NEUROSCIENCE!!!
(we ignore any other forms of biology / other subjects)

UI Pt. 2

Notes:

- papers will be handled in Latex, not pdf. their storage should be in latex projects, with latex, images, bib as Latex projects. But in the UI they should be presented normally like PDF.
- Like Cursor, humans should be able to click / highlight the paper and edit it (which looks like cursor, diff) or can highlight sections and add comments. Think of a lightweight, fast Github Doc-style interface but with cursor diffs.

UI Pt. 3

(You can keep this blank or add
your vibecode1 placeholder here).
